Open to Secure (O2S) Readers

Datasheet

Introduction

Rosslare's Open to Secure (O2S) family of readers are highly flexible smart card readers that redefine ease of use and high security for RFID access control solutions. The readers support reading from and writing to the secure memory of the world's most accepted RFID technologies –MIFARE Plus and MIFARE Classic EV1.

With MIFARE Plus credentials, you have access to the highest levels of cryptographic security with support for 128-bit AES encrypted communications between reader and credential. With O2S preprogrammed readers and credentials, you can have the highest level of secure access control solutions right out of the box.

The AY-x6x70 and credentials can also come with distinct custom keys and security configuration from the factory.

Choose from a variety of standard configurations to get the functionality that you need – US/UK/Asia or mullion mount, proximity only or proximity & keypad authentication, pigtail or terminal block termination, and multi-format Wiegand or OSDP outputs. You can customize the reader to meet your requirements for maximum configuration flexibility.

General Description

The AY-x6x70 readers read secure O2S ID data and the CSN from MIFARE Classic EV1 credentials.
